

Facility Hardware

Our production and delivery workflow is based on the core principle that data is always encrypted, in transit and at rest, using AES 256 encryption, onto our IBM3 cloud servers. We have an IBM3 production cloud server that we work from and access via Lucid Link and a file-sharing IBM3 server accessed via Aspera that we use to receive and deliver assets from and to clients. No data is ever transferred onto local devices at our end. We work off a secure cloud-based IBM3 server, managed by Base Media Cloud and accessed via LucidLink.

We exclusively work in Pro Tools.
